Exploring Quadratic Functions

Vocabulary
Write the given quadratic function in standard form. Then describe the shape of the graph and whether it has an absolute maximum or absolute minimum. Explain your reasoning.

\[ 2x^2 = x + 4 \]

Standard form: \[ f(x) = 2x^2 - x - 4 \]
Graph: The graph of this function is a parabola that opens up because the sign of the coefficient is positive. The graph has an absolute minimum because the \( a \) value is greater than 0.

Problem Set
Write each quadratic function in standard form.

1. \[ f(x) = x(x + 3) \]
   \[ f(x) = x^2 + 3x \]

2. \[ f(x) = 3x(x - 8) + 5 \]
   \[ f(x) = 3x^2 - 24x + 5 \]

3. \[ g(s) = (s + 4)s - 2 \]
   \[ g(s) = s^2 + 4s - 2 \]

4. \[ d(t) = (20 + 3t)t \]
   \[ d(t) = 3t^2 + 20t \]
5. \( f(n) = \frac{2n(3n - 6)}{3} \)
\( f(n) = \frac{2n \cdot 3n - 2n \cdot 6}{3} \)
\( f(n) = \frac{6n^2 - 12n}{3} \)
\( f(n) = \frac{6n^2}{3} - \frac{12n}{3} \)
\( f(n) = 2n^2 - 4n \)

6. \( m(s) = \frac{s(s + 3)}{4} \)
\( m(s) = \frac{s \cdot s + s \cdot 3}{4} \)
\( m(s) = \frac{s^2 + 3s}{4} \)
\( m(s) = \frac{1}{4}s^2 + \frac{3}{4}s \)

Write a quadratic function in standard form that represents each area as a function of the width. Remember to define your variables.

7. A builder is designing a rectangular parking lot. She has 300 feet of fencing to enclose the parking lot around three sides.

Let \( x \) = the width of the parking lot
The length of the parking lot = 300 - 2x
Let \( A \) = the area of the parking lot

\[ A(x) = x \cdot (300 - 2x) \]
\[ = x \cdot 300 - x \cdot 2x \]
\[ = 300x - 2x^2 \]
\[ = -2x^2 + 300x \]

8. Aiko is enclosing a new rectangular flower garden with a rabbit garden fence. She has 40 feet of fencing.

Let \( x \) = the width of the garden
The length of the garden = \( \frac{40 - 2x}{2} \)
\[ = 20 - x \]
Let \( A \) = the area of the garden

\[ A(x) = x \cdot (20 - x) \]
\[ = x \cdot 20 - x \cdot x \]
\[ = 20x - x^2 \]
\[ = -x^2 + 20x \]

9. Pedro is building a rectangular sandbox for the community park. The materials available limit the perimeter of the sandbox to at most 100 feet.

Let \( x \) = the width of the sandbox
The length of the sandbox = \( \frac{100 - 2x}{2} \)
\[ = 50 - x \]
Let \( A \) = the area of the sandbox

\[ A(x) = x \cdot (50 - x) \]
\[ = x \cdot 50 - x \cdot x \]
\[ = 50x - x^2 \]
\[ = -x^2 + 50x \]
10. Lea is designing a rectangular quilt. She has 16 feet of piping to finish the quilt around three sides.

Let \( x \) = the width of the quilt

The length of the quilt = \( 16 - 2x \)

Let \( A \) = the area of the quilt

\[
A(x) = x \cdot (16 - 2x) \\
= x \cdot 16 - x \cdot 2x \\
= 16x - 2x^2 \\
= -2x^2 + 16x
\]

11. Kiana is making a rectangular vegetable garden alongside her home. She has 24 feet of fencing to enclose the garden around the three open sides.

Let \( x \) = the width of the garden

The length of the garden = \( 24 - 2x \)

Let \( A \) = the area of the garden

\[
A(x) = x \cdot (24 - 2x) \\
= x \cdot 24 - x \cdot 2x \\
= 24x - 2x^2 \\
= -2x^2 + 24x
\]

12. Nelson is building a rectangular ice rink for the community park. The materials available limit the perimeter of the ice rink to at most 250 feet.

Let \( x \) = the width of the ice rink

The length of the ice rink = \( \frac{250 - 2x}{2} \)

Let \( A \) = the area of the ice rink

\[
A(x) = x \cdot \left( 125 - x \right) \\
= x \cdot 125 - x \cdot x \\
= 125x - x^2 \\
= -x^2 + 125x
\]

   \[ f(x) = a(x - 0)(x - 7) \]
   
   \[ = ax(x - 7), \text{ for } a < 0 \]
